

FREEING UP  
MORE  
SPACE FOR  
YOUR DATA.

VISION<sup>e</sup> | scan

## Our app does some pretty awesome things...

like compressing your image files when you scan business cards, freeing up more space in Salesforce for your other data.

We've found that when taking pictures of business cards with *Salesforce 1*, the average image size was **744kb**.

When scanning the same business cards with our scanning solution, the average image size was only **91k**.

That's **817%** saved on storage space.

- Salesforce currently allocates **a limited amount of file and data storage** per Salesforce org.
- Uploading data and files can take up valuable space in your Salesforce org, **yet data cannot be actionable if it is not in Salesforce**.
- With our solution, you don't have to worry about using tons of storage space when you scan business card data to Salesforce, **we've already taken care of it for you**.
